

Welcome to our July Monthly Roundup newsletter. We have lots to share with you this month from news about our newest application coming early August to featured blog posts and our product spotlight. Let's dive in...

PRODUCT SPOTLIGHT

**Purchase Order Processing (POP)
coming to AP Automation this August**

We are excited to announce that AP Automation Phase Two, Purchase Order Processing (POP), is being released early August! This new application will allow you to automate your entire procure-to-pay (P2P) cycle from procurement through to final supplier payment.

Automating your P2P cycle will streamline workflows, speed up processing times, reduce costs and offer unrivalled levels of visibility.

Be the first to see a demo of this new application by registering your interest with your Pegasus Partner today!

FEATURED PRODUCT

Discover the Data Connector

The Data Connector module in Opera 3 SE significantly enhances the return on investment (ROI) by unlocking deeper insights and enabling smarter, data-driven decision-making. The Data Connector allows you to seamlessly extract and analyse real-time data from across the Opera 3 SE system using familiar tools like Microsoft Excel and Power BI. This empowers teams to create custom dashboards, automate reporting, and monitor key performance indicators (KPIs) without relying on manual data exports or IT intervention.

By leveraging the Data Connector, you can identify inefficiencies, track trends, and respond proactively to operational challenges. For example, finance teams can instantly visualise cash flow trends, while sales managers can monitor pipeline performance in real time. These capabilities not only save time but also improve accuracy and strategic agility—key drivers of long-term ROI.

Ultimately, the Opera 3 SE Data Connector transforms raw data into actionable intelligence, helping you maximise the value of your ERP investment.

FEATURED BLOG POST

Procurement teams in modern Procure-to-pay (P2P) environment

Traditionally, procurement was largely an administrative function focused on placing purchase orders, negotiating prices, and ensuring timely deliveries. But modern P2P systems, powered by automation, artificial intelligence (AI), and real-time analytics, have changed the process. Procurement teams are no longer gatekeepers of spend, they are drivers of innovation, compliance, and efficiency.

Our featured blog post this month explores how the role of procurement professionals has transformed in the modern P2P environment.
